Contacts

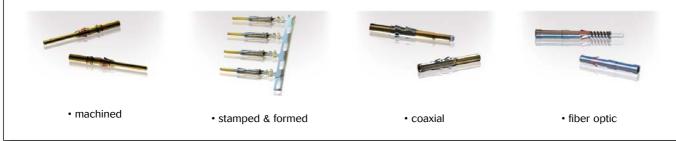

Description

The UTP series is delivered without contact (crimp version). When contacts are not loaded, this series offers the unique possibility to use the same contact in any layout as long as it receives the same active part size. Thus it is possible to buy only one contact reference and equip all connectors even if housings are different.

The main benefit is the standardisation which means reduction of inventory cost.

Bearing in mind that any additional tool or complicated assembly process should be avoided, our contacts are based on a snap-in principle which avoid the use of an insertion tool.

Crimp contacts are available in different versions:

Contact plating selector guide

As soon as you know what contact size you need, you next have to decide on which type to use. Souriau proposes mainly two different types of electrical contacts:

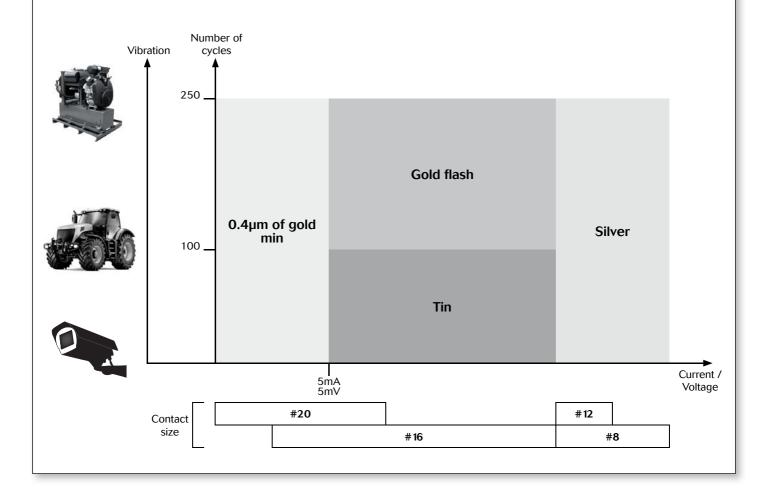

- Machined
- Stamped & formed

Machined contacts are generally chosen for low quantities purpose as well as a better solution for power applications. Stamped & formed contacts offer the ability to be crimped automatically which makes them more suitable for high volume production applications.

Then comes the question: What plating should I choose?

Hereunder is a graph with criteria to guide you:

NB: do not mix different plating (e.g. tin plated pin contact with gold plated socket contact).

Contact selector guide

Contact preloaded

i	Electrical characteristi contact resistance	cs:
#16 Ø1.6mm	Machined	< 3mΩ

Available platings (contact preloaded)	
Min 0.4μ gold over 2μ Ni	

Contact supply separately

Electrical characteristics: contact resistance					
#16	Machined	<3mΩ			
Ø1.6mm	Stamped & formed	< 6mΩ			

Available platings (contact supply separately)						
J	J Gold flash over 2μ Ni					
К	Min 0.4μ gold over 2μ Ni					
S31 Active part: Gold flash over Ni Crimp area: Nickel						
S18	Active part: 0.75µ gold min over 2µ Ni Crimp area: 1.3µ tin over Ni Other: Nickel					
TK6	2-5μ Sn pre-plated					

Packaging

Conscious of the wide variety of applications, contact packaging has been considered for small series (bulk packaging) and high volume production (reeled contacts):

Size contacts #20 & #16

 25 pieces loose packing (stamped & formed contacts)

50 pieces bulk packing (machined contacts)

 1000 pieces bulk packing (machined contacts)

 3000 pieces reeled (stamped & formed contacts)

 5000 pieces reeled (machined contacts)

Crimp contacts

How to make FMLB / LMFB connection

Contact 1 Contact 2	Standard male contact	Standard female contact	Longer male contact
Standard male contact		\checkmark	
Standard female contact	√		FMLB
Shorter female contact	LMFB		

First Mate Last Break contacts should be chosen only if the cavity is not marked with the earth symbol. For cavities marked with the earth symbol, standard contacts will fulfill the same role as a first mate, last break contact used in a standard cavity.

Ground symbol

#16 coaxial contacts

Coaxial contact range

We provide 2 types of coaxial contacts suitable for 50 or 75Ω , coaxial cable or twisted pair cable.

Monocrimp coaxial contact

- The monocrimp one-piece coaxial contacts offer high reliability plus the economic advantage of a 95% reduction in installation time over conventional assembly methods.
- This economy is achieved by simultaneously crimping both the inner conductor and outer braid or drain wire.

Multipiece crimp coaxial contact

- The inner conductor and outer braid is crimped individually.
- The thermoplastic insulating bushing in the outer body is designed to accept and permanently retain the inner contact.
- An outer ferrule is used to connect the braid to the outer contact and provide cable support to ensure against bending and vibration.

Suitable for Coaxial cable or Twisted cable

• For jacket diameter from 1.78 to 3.05mm Inner conductor up to 2.44mm diameter

 For jacket diameter from 0.64 to 1.45mm Inner conductor from AWG30 to AWG24

- Select appropriate monocrimp coax twisted pair contact and cable combination.
- Select appropriate crimp tooling (hand tool, S-die set, stop bushing).
- Strip the twisted pair cable to the designated wire strip lengths.
- Insert the stripped cable into the contact. One cable is to be inserted into the inside diameter of hyring, and pushed forwaerd into the inner contact. The second cable is to be inserted between the outside diameter of hyring and the
- · Crimp the contact.

Braid crimp (G) to be measured with die set fully closed

Inner conductor crimp (G) to be measured with die set fully closed

Note: all dimensions are in mm

Cable stip length

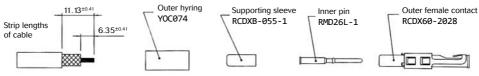

Contact assembly with dielectric diameter over 1.4mm - without inner supporting sleeve

Contact assembly with dielectric diameter under 1.4mm - with inner supporting sleeve

- Step 1:

 Assemble outer hyring onto cable

 Assemble supporting sleeve over dielectric and under braid
 Assemble inner pin to inner conductor, push back against
 sleeve and crimp

- Insert the assembly into the outer female contact until the inner pin snaps into place The cable braid (shield) should now cover the barrel of the outer female contact as shown

- Step 3:
 Slide outer hyring forward against spring and crimp in place as shown

Note: all dimensions are in mm

- Select appropriate cable and contact combination.
- Select appropriate crimp tooling (hand tool, S-die set, stop bushing).
- Strip coax cable to the designated wire strip lengths.
- Insert the stripped coax into the rear of the contact.
- · Crimp the contact.

Cable strip length

See cable strip lengths

Note : all dimensions are in mm

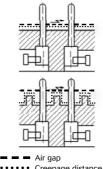

Glossary of terms

Clearance

Per the IEC 60664-1 it is the shortest distance between two conductive parts even over the air.

Creepage distance

Per the IEC 60664-1 it represents the shortest distance along the surface of the insulating material between two conductive parts.

· Working voltage

Per the IEC 60664-1 it is the highest r.m.s. value of A.C. or D.C. voltage across any particular insulation which can occur when the equipment is supplied at rated voltage.

· Rated impulse voltage

Impulse withstands voltage value assigned by the manufacturer to the equipment or to a part of it characterizing the specified withstand capability of its insulation against transient overvoltage.

Working current

It is the maximum continuous and not interrupted current able to be carried by all contacts without exceeding the maximum temperature of the insulating material.

Transient voltage

Extract from the IEC 60664-1: Short duration overvoltage of a few millisecond or less, oscillatory or non-oscillatory, usually highly damped.

CTI (Comparative Tracking Index)

The CTI value is commonly used to characterize the electrical breakdown properties of an insulating material. It allows users to know the tendency to create creepage paths. This value represents the maximum voltage after 50 drops of ammonium chloride solution without any breakdown.

• RTI (Relative temperature Index):

Extract from ULs website:

"Maximum service temperature for a material, where a class of critical property will not be unacceptably compromised through chemical thermal degradation, over the reasonable life of an electrical product, relative to a reference material having a confirmed, acceptable corresponding performance defined RTI.

- RTI Elec: Electrical RTI, associated with critical electrical insulating properties.
- RTI Mech Imp: Mechanical Impact RTI, associated with critical impact resistance, resilience and flexibility properties.
- RTI Mech Str: Mechanical Strength (Mechanical without Impact) RTI, associated with critical mechanical strength where impact resistance, resilience and flexibility are not essential"
